

FEATURE SHOWCASE

Akkadian Provisioning Manager

Reporting Manager

A powerful tool to generate reports from CUCM

As a standard feature of Akkadian Provisioning Manager, Reporting Manager is a powerful custom reporting tool which allows Administrators to use SQL database queries to generate reports from Cisco Unified Communications Manager (CUCM).

We enable highly granular report building for a variety of purposes:

- Usage analysis
- Auditing
- Compliance
- Bulk changes

If you are familiar with SQL you can use our Custom Query or if you are not familiar with SQL you can use Visual Query to build a report. The Visual Query will provide visual guidance to simplify the construction of an SQL query.

Reporting Manager makes it easy to:

Build CUCM Data Queries

- Run SQL queries directly against CUCM
- Access all the tables/fields in CUCM schema
- Visual query tool for drag and drop report building

Schedule Reports

- Create reusable reports
- Schedule recurring reports to run
- Email reports, as necessary
- Notifications when reports run

Manage Data

- Enables bulk changes and data inserts into CUCM
- Import external data to augment queries
- Export data for use by other systems
