## **Akkadian Labs Announces Support for Zoom Automated Provisioning** An Ideal Provisioning Solution for Zoom UC Environments

**Hoboken, NJ:** Akkadian Labs, the developer of the leading unified communications (UC) provisioning automation solution, is announcing support for Zoom Video Communications, Inc. to complement their longstanding support for Cisco Collaboration, Webex and Microsoft Teams UC platforms.

Built into their flagship product, [Akkadian Provisioning Manager](#), it allows for a single management solution for companies running the Zoom UC platform, as well as hybrid UC environments with other supported providers. UC engineers achieve a powerful ROI by streamlining repetitive, manual tasks across those UC platforms.

“As the market shifts and more organizations operate in Zoom environments, Akkadian Labs is committed to providing the best provisioning and employee on-boarding experience possible.” says Tom Bamert, Chief Product Officer of Akkadian Labs. “We’re thrilled to announce that we will be bringing customers the same level of speed, consistency, and security to Zoom as we have for Cisco, Webex and Microsoft Teams.”

Mitch Ricks, ISV Integrator Team Manager at Zoom added, “As we look to expand our enterprise-scale UC capabilities, having strategic partners like Akkadian Labs helps us position our UC offerings by adding functionality that enterprises value. We’re excited about this launch and look forward to future innovations from Akkadian.”

### **Zoom Provisioning Automation Capabilities**

Akkadian Provisioning Manager’s single pane of glass streamlines moves, add, changes and deletes for Zoom administrators including:

- Template driven provisioning for multiple Zoom UC applications
- Zero-touch provisioning via our native integrations with Active Directory and ServiceNow
- Off-load work to your HelpDesk with role-based access
- API Triggers to provision RedSky, Verint, Salesforce and other associated applications

### **Benefits to Customers**

These capabilities can impact customers in the following ways:

- Reduces UC provisioning time by 90%
- Allows the UC engineers to avoid repetitive, manual, error-prone work and focus on strategic projects
- Perfect for hybrid UC environments, with Zoom, Cisco Collaboration, Webex and Microsoft Teams
