Akkadian Labs and Mobile Heartbeat Announce Technology Partnership
Streamlining the provisioning of communications and collaboration solutions for the healthcare industry

Hoboken, NJ: Akkadian Labs, developer of the leading unified communications (UC) provisioning automation solution for enterprises and MSPs, is pleased to announce a new partnership with Mobile Heartbeat, the leading clinical communications and collaboration platform for the healthcare enterprise. Our flagship product, Akkadian Provisioning Manager, now integrates with Mobile Heartbeat's MH-CURE® clinical communication and collaboration platform -- allowing zero-touch provisioning of Mobile Heartbeat users.

"We are excited to be working with Mobile Heartbeat. With 50% of the top hospitals in the U.S. already using Akkadian Provisioning Manager, we envision numerous joint customers benefiting from this technology partnership" said Tom Bamert, Chief Product Officer at Akkadian Labs.

Users of MH-CURE are automatically provisioned with the API Triggers feature, streamlining UC workflows. For example, after on-boarding a new user into the Cisco Collaboration UC platform, Provisioning Manager can be configured to add a MH-CURE account for the new employee – saving time, reducing costs, and assuring consistency.

This technology partnership between Akkadian Labs and Mobile Heartbeat enables the healthcare enterprise to seamlessly manage MACD's for a variety of communications and collaboration solutions, allowing the UC administrator to focus on strategic projects rather than repetitive, manual tasks. "By integrating Mobile Heartbeat's MH-CURE with Akkadian Provisioning Manager we're allowing IT teams, project managers, and administrators to efficiently manage user access to key collaboration solutions across the healthcare enterprise" said Mobile Heartbeat Chief Operating Officer, Mike Detjen. "Interoperability across the ecosystem, which ultimately helps care teams access the tools necessary to deliver patient care is our goal".

The Akkadian Provisioning Manager integration with Mobile Heartbeat's MH-CURE is currently deployed at one of the largest healthcare networks in the American Southwest.

About Akkadian Labs

Akkadian Labs helps enterprises streamline user provisioning for unified communications. Our automated UC provisioning software helps turn manual, error-prone provisioning tasks into streamlined, repeatable steps that anyone can perform. Businesses and MSPs trust Akkadian Labs to make their UC platforms more efficient, cost-effective, and easier to manage.
