

The Akkadian Platform:

Governed Collaboration Lifecycle
Automation for Federal, State, Local, and
Regulated Environments

Managing collaboration environments across Microsoft and Cisco platforms is already complex. Government cloud environments add additional security, compliance, and operational requirements.

The Akkadian Platform simplifies user provisioning, moves, adds, changes, deletes, and lifecycle management across Cisco and Microsoft collaboration platforms, including government-community and FedRAMP-authorized editions. **With Akkadian’s automated collaboration administration and governed workflows, agencies and contractors can reduce manual effort, improve consistency, and maintain operational control.**

The Akkadian Platform is compatible with U.S. government cloud environments, but it is not itself certified under U.S. government cloud authorization programs. Specifically, Akkadian Labs does not hold a FedRAMP authorization, DoD provisional authorization, or StateRAMP authorization. Because the software runs within the customer’s accredited network and security boundary, it inherits that boundary’s controls rather than requiring its own cloud-service authorization.

Supported Government Environments

Platform	Environments Supported by Akkadian	Underlying Authorization*
Microsoft Teams & 365	Commercial, GCC, GCC High, DoD	Microsoft holds FedRAMP High and DoD SRG IL4–IL5 authorizations for these cloud environments
Cisco Webex	Webex Commercial, Webex for Government	Cisco holds FedRAMP Moderate authorization for Webex for Government
Cisco UC (On-Prem & Cloud)	Cisco Unified Communications Manager (on-premises), UCM Cloud for Government, UCM-CG	On-prem deployments reside within the customer's accreditation boundary

*Authorizations listed are held by Microsoft and Cisco for their respective cloud platforms, not by Akkadian Labs.

Security & Data Handling Highlights

- 

Customer-Hosted Deployment

Runs inside your organization's network and security boundary, providing control over infrastructure, access, and compliance requirements.
- 

Data Stays in Your Environment

Provisioning and administrative data remain within the customer environment and are not routed through Akkadian-hosted infrastructure.
- 

Secure Platform Connectivity

Encrypted API communications using TLS 1.2+ for connections to Microsoft and Cisco collaboration platforms.
- 

Role-Based Access Control

Define and enforce administrative permissions with granular access controls aligned to operational responsibilities.
- 

Comprehensive Audit Logging

Track provisioning, configuration changes, and administrative actions with complete audit visibility.
- 

Government Cloud Compatibility

Supports lifecycle management and provisioning across Microsoft GCC, GCC High, DoD, Webex for Government, and other supported environments.
- 

Governed Automation

Apply standardized workflows and approval processes to reduce manual admin and improve operational consistency.
- 

Native Integrations

Connects using Microsoft and Cisco published administrative APIs and management interfaces, including Microsoft Graph Government endpoints and Webex for Government APIs.

Frequently Asked Questions

Is the customer-hosted Akkadian Platform FedRAMP certified?

No. FedRAMP is an authorization program for cloud services. The Akkadian Platform is customer-deployed software operating within the customer's environment. As a result, it supports administration and lifecycle management of FedRAMP-authorized collaboration platforms without requiring its own FedRAMP authorization.

Can the customer-hosted Akkadian Platform be used in highly regulated environments?

Yes. The Akkadian Platform supports provisioning and lifecycle management for Microsoft Teams GCC High and DoD environments, as well as government-focused Cisco collaboration environments. For data handling and support personnel questions specific to ITAR or CUI programs, customers should reach out to our team to review requirements.

Who should I contact for compliance documentation?

Email compliance@akkadianlabs.com. Our team can provide architecture guidance, deployment information, and available compliance documentation to support security and procurement reviews.
